

Special Issue

Dynamic Modelling for Process Control and Optimisation

Message from the Guest Editor

This Special Issue of *CivilEng* journal aims to gather the most recent research and developments in dynamic modelling for process control in the minerals industry. We would like to invite all researchers and experts who work in this field to submit your papers. The target in this Special Issue is fundamental research on model development, application of dynamic models, and case studies which highlight the role of dynamic models in process control.

About the Journal

Message from the Editor-in-Chief

The journal is devoted to academic researchers, working in the main fields of civil engineering, who want to spread their findings in the scientific community. Topics include: solid mechanics, structural and earthquake engineering, environmental and geotechnical engineering, survey and geo-spatial engineering, coastal and harbor engineering, building physics and sustainable materials, municipal or urban engineering, engineering and economy, and construction engineering. Contributions which are a good mixture of rigorous theoretical principles and experience-based technical solutions are especially welcome. Purely numerical or experimental approaches are also accepted, provided they are accompanied by a strong speculative investigation, finalized to extract a physical interpretation, and useful for enlarging the general knowledge of the problem.

Editor-in-Chief

Prof. Angelo Luongo

Department of Civil, Architecture and Building and Environmental Engineering, University of L'Aquila, Via Giovanni Gronchi 18, 67100 L'Aquila, Italy

Author Benefits

High Visibility:

indexed within Scopus, ESCI (Web of Science), Ei Compendex and other databases.

Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 27 days after submission; acceptance to publication is undertaken in 3.7 days (median values for papers published in this journal in the first half of 2025).

Journal Rank:

CiteScore - Q2 (Safety, Risk, Reliability and Quality)
