Special Issue

Membrane Technology in Decentralized Applications

Message from the Guest Editor

Membrane technology is becoming a key solution in the persecution of more sustainable processes. In addition to its well-known advantages, such as high energy efficiency, easy scaling up and modular design, membrane devices are relatively easy to implement in areas where the geographic configuration makes the distribution of basic resources (e.g., water, electricity) very challenging. In this Special Issue, we try to show examples of applications in which membranes can improve people's quality life in decentralised areas. We look forward to receiving your research work to show the potential of membranes, which can help to fulfill the targets of the Sustainable Development Goals.

About the Journal

Message from the Editor-in-Chief

Clean Technologies (ISSN 2571-8797) is an international, open access journal of novel scientific research on technology development aimed at reducing the environmental impact of human activities. *Clean Technologies* publishes reviews, regular research papers, communications and short notes which show a significant advance in the development of sustainable technology that reduces energy consumption, environmental pollution and/or the use of water and nonrenewable resources. Our aim is to encourage scientists to publish their experimental and theoretical research in detail as open access, serving a trustable base of advance for the scientific community.

Author Benefits

High Visibility:

indexed within Scopus, ESCI (Web of Science), Inspec, AGRIS, RePEc, and other databases.

Journal Rank:

JCR - Q2 (Environmental Sciences) / CiteScore - Q1 (Environmental Science (miscellaneous))

Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 33.7 days after submission; acceptance to publication is undertaken in 5.8 days (median values for papers published in this journal in the first half of 2025).
