Special Issue

Advanced Technologies in Drinking Water

Message from the Guest Editors

Access to clean water is of utmost importance for human health and society at large. Effective drinking water treatment technology is the key to water safety and human health. Green and low-carbon technologies refers to the technologies that achieve satisfactory treatment effect under the condition of low carbon emissions and lower pollutant generation. These technologies are considered essential to achieving the United Nations Sustainable Development Goals (SDGs) and, thus, it becomes necessary to follow recent trends in the development of water treatment technologies. In this Special Issue, we focus on the interactions between green and low-carbon developments and drinking water treatment technologies. Topics of interest to this Special Issue include (but are not limited to):

- Green and low-carbon drinking water treatment technologies;
- Technology for removal of emerging contaminants removal from drinking water;
- Safe transmission and distribution of water supply networks;
- Safe and sanitary secondary water supply technologies.

About the Journal

Message from the Editor-in-Chief

Clean Technologies (ISSN 2571-8797) is an international, open access journal of novel scientific research on technology development aimed at reducing the environmental impact of human activities. *Clean Technologies* publishes reviews, regular research papers, communications and short notes which show a significant advance in the development of sustainable technology that reduces energy consumption, environmental pollution and/or the use of water and nonrenewable resources. Our aim is to encourage scientists to publish their experimental and theoretical research in detail as open access, serving a trustable base of advance for the scientific community.

Editor-in-Chief

Prof. Dr. Patricia Luis Alconero
Materials & Process Engineering, UCLouvain, Place Sainte Barbe 2, 1348 Louvain-la-Neuve, Belgium

Author Benefits

High Visibility:

indexed within Scopus, ESCI (Web of Science), Inspec, AGRIS, RePEc, and other databases.

Journal Rank:

JCR - Q2 (Environmental Sciences) / CiteScore - Q1 (Environmental Science (miscellaneous))

Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 33.7 days after submission; acceptance to publication is undertaken in 5.8 days (median values for papers published in this journal in the first half of 2025).
