

Special Issue

Evolving Plant Phenology Responses and Resilience in a Changing Climate

Message from the Guest Editor

Our interdisciplinary Special Issue welcomes contributions that span the spectrum of plant phenological research. We invite investigations into underlying molecular and physiological processes, innovative methodologies for monitoring phenological changes, and large-scale observational and modeling studies that elucidate patterns and predict future shifts. Furthermore, we encourage studies exploring plant adaptation strategies, conservation implications, and policy recommendations in the face of this climate-induced transformation. This collection aims to provide a comprehensive overview of the current state of knowledge on plant phenology in a changing climate. By fostering collaboration and knowledge exchange among researchers, we aspire to highlight our understanding of these complex interactions and the development of strategies for adapting to and mitigating the impacts of climate change on our natural and agricultural landscapes.

Boulder, CO 80309-0450, USA

Author Benefits

High Visibility:

indexed within Scopus, ESCI (Web of Science), GeoRef, AGRIS, and other databases.

Journal Rank:

JCR - Q2 (Meteorology and Atmospheric Sciences) /
CiteScore - Q2 (Atmospheric Science)

Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 21.6 days after submission; acceptance to publication is undertaken in 3.9 days (median values for papers published in this journal in the first half of 2025).
