# Special Issue

# Interactions of the Variation in Environmental Conditions Due to Climate Change and the Possibility of Obtaining a Low-Carbon Building Stock

## Message from the Guest Editors

Climate change will generate unfavourable living conditions. To reduce this impact, the achievement of a low carbon economy in different sectors is required. In the case of buildings, there should be a transition from existing buildings to almost zero energy consumption buildings. However, obtaining nearly zero energy buildings can vary depending on the climatic conditions of the building. In this regard, a relationship between energy consumption, the evolution of the climate and the users' thermal comfort will establish appropriate strategies for a low-carbon building stock. The objective of this Special Issue is to analyse the importance of climate in the adoption of nearly zero energy buildings. The climatic analyses based on the adaptive capacity of users and the design requirements of buildings will adapt better the building stock. Likewise, the analyses carried out with climate change scenarios will reveal the expected evolution throughout the 21st century.

## Message from the Editor-in-Chief

## Editor-in-Chief

Dr. Timothy G. F. Kittel
Institute of Arctic and Alpine Research, University of Colorado Boulder, Boulder, CO 80309-0450, USA

## Author Benefits

**High Visibility:**

indexed within Scopus, ESCI (Web of Science), GeoRef, AGRIS, and other databases.

**Journal Rank:**

JCR - Q2 (Meteorology and Atmospheric Sciences) / CiteScore - Q2 (Atmospheric Science)

**Rapid Publication:**

manuscripts are peer-reviewed and a first decision is provided to authors approximately 21.6 days after submission; acceptance to publication is undertaken in 3.9 days (median values for papers published in this journal in the first half of 2025).
