Climate Change Impacts on Territories, People and Nature

Message from the Guest Editors

The climate is changing, and with it, so are ways and forms of life. Mediated through social, cultural, economic, and political structures and processes, its effects are disproportionate, unequal, and aggravating inequalities. To cope with climate change, the need to understand its impacts on territories, people and nature at a multi-scale level arises. We are pleased to invite you to promote a polyphonic discussion where different, or even opposite well-grounded perspectives are welcomed to co-create possible alternatives for viable futures on Earth for human and non-human beings. Original research articles and reviews are welcome. Research areas may include (but are not limited to) the following:

- Climate justice, environmental racism and socio-environmental conflicts;
- Public policies and environmental citizenship;
- Inequalities and socioecological integration;
- Socio-ecological futures;
- Society/nature relations;
- The multidimensionality of climate change impacts (on health, food, agriculture, environment, economy, technology, among others...);
- Global North and South perspectives.

We look forward to receiving your contributions.

Author Benefits

High Visibility:

indexed within Scopus, ESCI (Web of Science), GeoRef, AGRIS, and other databases.

Journal Rank:

JCR - Q2 (Meteorology and Atmospheric Sciences) /
CiteScore - Q2 (Atmospheric Science)

Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 21.6 days after submission; acceptance to publication is undertaken in 3.9 days (median values for papers published in this journal in the first half of 2025).
