

Special Issue

Measuring the Impact of Public-Private Governance for Climate Change

Message from the Guest Editor

Heritage is what we leave for future generations. Internationally designated heritage areas (i.e., World Heritage, RAMSAR, MAB sites) are the best of the best, the very few locations deserving of conservation in perpetuity. These rare valuable landscapes represent 130,000 protected areas, and each face biophysical and social risk from climate change and human incursion. Decision making at the local and regional scale balances the knowledge of local conditions, the predicted climatic and socioeconomic influences, and available resources. Authors are invited to contribute to this Special Issue to advance the management of internationally designated heritage areas. The intended contributions of this Special Issue are: a) an increased consideration of heritage at the landscape scale, b) advancing adaptive, climate-sensitive approaches to management and c) empowering an inclusive approach that effectively engages marginalized and under-represented groups. Prof. Dr. Jim Perry

Author Benefits

High Visibility:

indexed within Scopus, ESCI (Web of Science), GeoRef, AGRIS, and other databases.

Journal Rank:

JCR - Q2 (Meteorology and Atmospheric Sciences) /
CiteScore - Q2 (Atmospheric Science)

Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 21.6 days after submission; acceptance to publication is undertaken in 3.9 days (median values for papers published in this journal in the first half of 2025).
