Climate Variability and Change in the 21th Century

Message from the Guest Editors

During the last decades, there is a growing interest in climate variability and change by scientific community, due to their economic, social and ecological impacts. Knowledge of spatial and temporal climate distribution is fundamental to several disciplines such as geography, hydrology, forest management, agriculture, ecology and others. Moreover future climate projections is essential for rural development and planning and infrastructure works programming. Topics of interest include, but are not limited to:

- Regional Climate Models
- Climate Variability
- Climate Change Impacts
- Dynamic and Statistical Downscaling Techniques
- Spatial Mapping of Meteorological Parameters
