Adaptive Heritage: Inclusive, Climate Sensitive Futures for Landscapes Containing Internationally-Designated Protected Areas

Message from the Guest Editor

Heritage is what we leave for future generations. Internationally designated heritage areas (i.e., World Heritage, RAMSAR, MAB sites) are the best of the best, the very few locations deserving of conservation in perpetuity. These rare valuable landscapes represent 130,000 protected areas, and each faces biophysical and social risk from climate change and human incursion. Heritage conservation is often approached at a relatively fine temporal and spatial scale. Management decisions are guided by efficiency, resulting in a narrow stakeholder base. Authors are invited to contribute to this Special Issue to advance the management of internationally designated heritage areas. The intended contributions of this Special Issue are: a) an increased consideration of heritage at the landscape scale, b) advancing adaptive, climate-sensitive approaches to management and c) empowering an inclusive approach that effectively engages marginalized and under-represented groups.

Author Benefits

High Visibility:

indexed within Scopus, ESCI (Web of Science), GeoRef, AGRIS, and other databases.

Journal Rank:

JCR - Q2 (Meteorology and Atmospheric Sciences) /
CiteScore - Q2 (Atmospheric Science)

Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 19.7 days after submission; acceptance to publication is undertaken in 2.9 days (median values for papers published in this journal in the second half of 2024).
