

# Special Issue

## Sub-Regional Scale Climate Change

### Message from the Guest Editors

While average global temperature projections under various scenarios consistently show an increase in temperature, how this is manifested in different subregions is uncertain. In light of this lack of knowledge and understanding, we invite you to contribute to this Special Issue on “Subregional-Scale Climate Change” firmly based on both observational and modeling studies relevant to long-term climate variability, climate change, and regional aspects of future climate under various scenarios. Solicited contributions include, but are not limited to, observed and simulated regional climate, and dynamically or statistically downscaling products using novel methods, including highlights of regional disparities between recent climate and recent future projections.

## About the Journal

### Message from the Editor-in-Chief

*Climate* (ISSN 2225-1154) was established in 2013 to provide an open-access outlet for innovative research, review articles, new direction papers, and short communications relevant to all disciplines related to climate at all scales. The journal encourages papers ranging from climate change detection and attribution and Earth system modeling to ecosystem, hydrologic, and socioeconomic impacts and climate mitigation and adaptation measures. The influence of *Climate* is strong and growing (IF 3.2 in 2024, CiteScore 5.7 in 2024).

### Author Benefits

#### High Visibility:

indexed within Scopus, ESCI (Web of Science), GEOBASE, GeoRef, AGRIS, and other databases.

#### Journal Rank:

JCR - Q2 (Meteorology and Atmospheric Sciences) /  
CiteScore - Q2 (Atmospheric Science)

#### Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 20.8 days after submission; acceptance to publication is undertaken in 3.8 days (median values for papers published in this journal in the second half of 2025).
