

## Special Issue

# Sleep, Rhythms, and Mental Health

### Message from the Guest Editors

Sleep and the circadian clock are increasingly being recognised as critical in the development of psychiatric conditions and mood problems in the general population. Sleep problems are commonly one of the main diagnostic criteria in mental health, and frequently, treating underlying problems with sleep or the circadian clock can be an efficacious treatment for psychiatric symptoms. Although much work has been done to elucidate the role of sleep and rhythms in mental health problems, these conditions are often highly heterogeneous, and with great advances in the knowledge and technology available to us, there is still more to uncover. With this Special Issue, we invite submissions from all fields within Sleep, Circadian Rhythms, and Mental Health, including clinical and preclinical human work, and insights from animal models. In particular, we encourage submissions which have a focus on clinical translation, which may contribute to the growing field of applied circadian medicine.

### Guest Editors

Dr. Sean W. Cain

Sleep and Circadian Rhythms Program, School of Psychological Sciences and Turner Institute for Brain and Mental Health, Monash University, 18 Innovation Walk, Clayton Campus, Clayton, VIC 3800, Australia

Dr. Elise McGlashan

#### Author Benefits

##### High visibility:

indexed within Scopus, ESCI (Web of Science), PubMed,  
PMC, FSTA, and other databases.

##### Journal Rank:

CiteScore - Q2 (Neuroscience (miscellaneous))

##### Rapid Publication:

manuscripts are peer-reviewed and a first decision is  
provided to authors approximately 37 days after  
submission; acceptance to publication is undertaken in 4.7  
days (median values for papers published in this journal in  
the first half of 2025).
