Deadline for manuscript
submissions:

30 November 2024

Message from the Guest Editor

Dear Colleagues,

Physical vapor deposition (PVD) is a widely used technique used for the preparation of thin films and surface coatings. PVD has been widely used in industry and combined with different methods to produce film components with excellent performance. Uniform PVD coatings provide hard surfaces that can be applied to a variety of materials and substrates. The PVD process can also be used to form multilayer coatings, composite coatings, oblique coatings, and unique structures. The PVD multilayered film structure is beneficial for improving oxidation resistance, enhancing mechanical properties, reducing internal stress, inhibiting crack propagation, and improving fracture toughness. We sincerely invite you to contribute your original papers to this Special Issue. The topics of interest include (but are not limited to) the following topics:

- Thin film coating techniques;
- Characterization of thin films for micro-components;
- Advanced sputtering coatings;
- -Multilayer thin film preparation and applications;
- Novel PVD coating techniques;
- Optical interference coatings;
- Mechanical stress in thin films and coatings;
- Simulation and modeling in PVD processes.

Message from the Editorial Board

Now more than ever, research is called for to produce technologies and improve knowledge to solve the major challenges faced by our society. The development of new materials and devices for (without the ambition to be exhaustive) energy, health and food technology, together with the need for establishing processes that reduce the impact on critical resources and the environment, is indeed at the center of most contemporary research. Surface science and engineering play a key role in this regard. Refining surfaces and their modifications provides new materials, architectures and processes with a huge potential to aid most societal challenges. *Coatings* is a well-established, peer-reviewed, online journal that focuses on the dissemination of publications in the field of surface science and engineering. *Coatings* publishes original research articles that report cutting-edge results and review papers on the hottest topics.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), Inspec, CAPlus / SciFinder, and other databases.

Journal Rank: JCR - Q2 (*Materials Science, Coatings & Films*) / CiteScore - Q2 (*Surfaces and Interfaces*)
