

Optical Thin Films and Coatings: Synthesis, Characterisation and Applications

Guest Editors:

Dr. Marcio Peron Franco de Godoy

Associate Professor, Physics
Department, Universidade
Federal de São Carlos (UFSCar),
São Carlos, Brazil

Dr. Marcelos Lima Peres

Associate Professor, Instituto de
Física e Química, Universidade
Federal de Itajuba, Itajubá, Brazil

Deadline for manuscript
submissions:

10 November 2024

Message from the Guest Editors

Thin-film technology revolutionized modern life by enabling compact optoelectronic devices and smart coatings. Current applications include understanding the substrate conformation and crystal structure of thin films during synthesis processes and their correlation to physical and chemical properties, particularly to optical-related phenomena. The control and use of light emission and/or absorption and light guiding provide interesting insights that are suitable for photonics, sensing, or detecting applications. In addition, optical materials present new fundamental issues and functional properties under extreme conditions, such as low/high temperatures, electric and magnetic fields, or by controlling dimensionality.

This Special Issue focuses on the advances in the synthesis, characterization, and application of optical thin films and coatings.

- Novel thin-film and coating fabrication methods;
- Rare-earth-doped thin films and coatings;
- Organic, inorganic, smart, and 2D luminescent materials;
- Light-assisted electronic transport;
- Electric transport in 2D electron/hole gases at interfaces;
-

Special Issue

Editors-in-Chief

Prof. Dr. Wei Pan

State Key Laboratory of New
Ceramics and Fine Processing,
School of Materials Science &
Engineering, Tsinghua University,
Beijing 100084, China

Dr. Emerson Coy

NanoBioMedical Centre, Adam
Mickiewicz University in Poznań,
ul. Wszechnicy Piastowskiej 3, 61-
614 Poznań, Poland

Message from the Editorial Board

Now more than ever, research is asked to deliver knowledge and technologies to solve the major challenges faced by our society. The development of new materials and devices for (without the ambition to be exhaustive) energy, health and food technology, together with the need for establishing processes that reduce the impact on critical resources and the environment, is indeed in the spotlight of most contemporary research. Surface science and engineering play a key role in this regard, with an incredible potential in delivering new and deep scientific understanding and technical solutions essential to solve most of the major societal challenges.

Coatings is a well-established, peerreviewed, online journal dedicated to the vibrant field of surface science and engineering. Coatings publishes original research articles that report cutting-edge results and review papers that make the point on the hottest research topics.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), Inspec, CAPlus / SciFinder, and other databases.

Journal Rank: JCR - Q2 (*Materials Science, Coatings & Films*) / CiteScore - Q2 (*Surfaces and Interfaces*)
