Dear Colleagues,

Biofilms are composed of a complex three-dimensional extracellular matrix in which bacteria are embedded. As biofilms provide mechanical cohesive stability, the microorganisms embedded in the biofilm matrix show a high survival rate and persistence. In addition, biofilm formation promotes the colonization of bacteria in almost all kinds of surfaces, including natural and synthetic surfaces. Recently, biofilms have been intentionally engineered for various applications exploiting their unique properties. In this Special Issue, we focus on the composition of biofilms (natural and artificial) and their application in different fields, including agricultural, environmental, medical, and industrial biotechnology. The topics of interest for this Special Issue include:

Application of biofilms in industry;
Biofilms for improved enzymatic activity;
Nanoparticles and biofilm formation;
Biofilms and improved plant growth;
Biofilms and bioremediation;
Viscoelastic properties and surface topography of biofilms for biotechnological applications;
Biofilms for erosion resistance;
Biofilms for medical applications;
Biofilms in construction materials;
Other applications.

Message from the Editorial Board

Now more than ever, research is called for to produce technologies and improve knowledge to solve the major challenges faced by our society. The development of new materials and devices for (without the ambition to be exhaustive) energy, health and food technology, together with the need for establishing processes that reduce the impact on critical resources and the environment, is indeed at the center of most contemporary research. Surface science and engineering play a key role in this regard. Refining surfaces and their modifications provides new materials, architectures and processes with a huge potential to aid most societal challenges. Coatings is a well-established, peer-reviewed, online journal that focuses on the dissemination of publications in the field of surface science and engineering. Coatings publishes original research articles that report cutting-edge results and review papers on the hottest topics.

Author Benefits

Open Access:— free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), Inspec, CAPlus / SciFinder, and other databases.

Journal Rank: JCR - Q2 (Materials Science, Coatings & Films) / CiteScore - Q2 (Materials Chemistry)
