Deadline for manuscript
submissions:

30 November 2024

Message from the Guest Editor

Dear Colleagues,

This Special Issue invites reviews and the latest research focused on the synthesis, properties, and applications of nanoparticles, fiber, and coatings. The coating itself may be an all-over coating, completely covering the substrate, or it may only cover parts of the substrate. Nanoparticles are tiny materials having sizes which range from 1 to 100 nm, and fiber structure is generally known in micro and macro terms. Their reactivity, toughness, and other properties are also dependent on their unique size, shape, and structure.

Hence, potential topics include but are not limited to the following:

- Synthesis methods;
- Structural determination using different diffraction techniques;
- Spectroscopic methods (e.g., IR, NMR, Raman, UV-Vis, CD);
- Characterization of different properties of nanoparticles, fiber, and coatings—catalytic activity, conductivity, magnetic, luminescence, porosity;
- Application of theoretical methods for the determination of structures and properties of nanoparticles, fiber, and coatings;
- A variety of applications of nanoparticles, fiber, and coatings.

Editors-in-Chief

Prof. Dr. Wei Pan

State Key Laboratory of New
Ceramics and Fine Processing,
School of Materials Science &
Engineering, Tsinghua University,
Beijing 100084, China

Dr. Emerson Coy

NanoBioMedical Centre, Adam
Mickiewicz University in Poznań,
ul. Wszechnicy Piastowskiej 3, 61-
614 Poznań, Poland

Message from the Editorial Board

Now more than ever, research is called for to produce technologies and improve knowledge to solve the major challenges faced by our society. The development of new materials and devices for (without the ambition to be exhaustive) energy, health and food technology, together with the need for establishing processes that reduce the impact on critical resources and the environment, is indeed at the center of most contemporary research. Surface science and engineering play a key role in this regard. Refining surfaces and their modifications provides new materials, architectures and processes with a huge potential to aid most societal challenges. *Coatings* is a well-established, peer-reviewed, online journal that focuses on the dissemination of publications in the field of surface science and engineering. *Coatings* publishes original research articles that report cutting-edge results and review papers on the hottest topics.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), Inspec, CAPlus / SciFinder, and other databases.

Journal Rank: JCR - Q2 (*Materials Science, Coatings & Films*) / CiteScore - Q2 (*Surfaces and Interfaces*)
