submissions:

closed (31 July 2019)

Message from the Guest Editor

Optical coatings have been widely applied in various optical devices to perform antireflection, high reflection, beam splitting, and bandpass filtering. Optical coatings are desired that offer more advanced performances, such as ultra-thin perfect absorption, perfect phase retardation, and wide angle bandpass filtering.

Contributions to this Special Issue are welcomed on all subjects related to including design, manufacturing and measurement of manufacturing of optical thin film coatings. Especially, welcome are papers that raise new questions and new possibilities or examine old problems from a new angle.

Message from the Editorial Board

Now more than ever, research is called for to produce technologies and improve knowledge to solve the major challenges faced by our society. The development of new materials and devices for (without the ambition to be exhaustive) energy, health and food technology, together with the need for establishing processes that reduce the impact on critical resources and the environment, is indeed at the center of most contemporary research. Surface science and engineering play a key role in this regard. Refining surfaces and their modifications provides new materials, architectures and processes with a huge potential to aid most societal challenges. *Coatings* is a well-established, peer-reviewed, online journal that focuses on the dissemination of publications in the field of surface science and engineering. *Coatings* publishes original research articles that report cutting-edge results and review papers on the hottest topics.

Author Benefits

Open Access:— free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), Inspec, Chemical Abstracts, and many other databases.

CiteScore (2019 Scopus data): 2.4, which equals rank 59/120 (Q2 in SJR) in 'Materials Science: Surfaces, Coatings and Films'.
