# Surface Modification of Advanced Transition Metal-Based Materials for Electrochemical Energy Storage

Guest Editor:

#### Dr. Yong Liu

School of Materials Science and Engineering, Henan University of Science and Technology, Luoyang, China

Deadline for manuscript submissions: **10 November 2024** 

### Message from the Guest Editor

Widespread application of fossil fuels for energy generation and transportation purposes has dramatically increased the concentration of greenhouse gases in the atmosphere, causing an unprecedented rise in the Earth's temperature and acidification of the oceans. Therefore, there is an urgent need to reduce the devastating consequences of global warming. Meanwhile, transition metal compounds are also rich in physical and chemical properties and widely used in electrochemical energy storage. They are key materials for chemical power supply, such as lithium/sodium-ion batteries, lithium-sulfur batteries. metal air batteries, supercapacitors, etc. They are usually of variable valence, composition and structure, involved in complex chemical reactions and structure-activity relationships. Developing their controllable preparatory methods, revealing the laws of physical properties, building battery devices, and achieving high-density energy storage have been the hot spots and focuses of crossdisciplinary research in chemistry, materials, energy and other disciplines.

## **Editors-in-Chief**

#### Prof. Dr. Wei Pan

State Key Laboratory of New Ceramics and Fine Processing, School of Materials Science & Engineering, Tsinghua University, Beijing 100084, China

#### Dr. Emerson Coy

NanoBioMedical Centre, Adam Mickiewicz University in Poznań, ul. Wszechnicy Piastowskiej 3, 61-614 Poznań, Poland

## Message from the Editorial Board

Now more than ever, research is called for to produce technologies and improve knowledge to solve the major challenges faced by our society. The development of new materials and devices for (without the ambition to be exhaustive) energy, health and food technology, together with the need for establishing processes that reduce the impact on critical resources and the environment, is indeed at the center of most contemporary research. Surface science and engineering play a key role in this regard. Refining surfaces and their modifications provides new materials, architectures and processes with a huge potential to aid most societal challenges. Coatings is a well-established, peer-reviewed, online journal that focuses on the dissemination of publications in the field of surface science and engineering. Coatings publishes original research articles that report cutting-edge results and review papers on the hottest topics.

# **Author Benefits**

**Open Access:** free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), Inspec,

CAPlus / SciFinder, and other databases.

**Journal Rank:** JCR - Q2 (*Materials Science, Coatings & Films*) / CiteScore - Q2 (*Surfaces and Interfaces*)
