Antibacterial Surfaces, Thin Films, and Nanostructured Coatings

Guest Editor:

Dr. Daniele Valerini

ENEA—Italian National Agency for New Technologies, Energy and Sustainable Economic Development, Brindisi, Italy

Deadline for manuscript submissions:

closed (30 November 2020)

Message from the Guest Editor

Antibacterial surfaces can play a key role in everyday applications, spanning from biomedical purposes (medical devices, human implants, etc.) to usages for food and beverages (e.g., packaging). Such surfaces are fundamental to prevent the occurrence and diffusion of clinical infections and foodborne diseases, or to preserve the quality of the packaged content.

Different approaches can be pursued to confer antimicrobial properties to the surface of a material, like the incorporation of antibacterial agents within the material surface or their deposition as coating films. New and ever more efficient materials have been experimented with and effectively used in the aforementioned applications.

Together with the antimicrobial activity, further essential aspects should be considered when dealing with these applications, namely the enhancement of other materials properties, as well as safety issues and even environmental aspects. Secondly, a possible influence on human health should be taken into account. Finally, it is important to consider the usage of antimicrobial surfaces in conjunction with eco-friendly bioplastics.

IMPACT FACTOR 3.4

Editors-in-Chief

Prof. Dr. Wei Pan

State Key Laboratory of New Ceramics and Fine Processing, School of Materials Science & Engineering, Tsinghua University, Beijing 100084, China

Dr. Emerson Coy

NanoBioMedical Centre, Adam Mickiewicz University in Poznań, ul. Wszechnicy Piastowskiej 3, 61-614 Poznań, Poland

Message from the Editorial Board

Now more than ever, research is called for to produce technologies and improve knowledge to solve the major challenges faced by our society. The development of new materials and devices for (without the ambition to be exhaustive) energy, health and food technology, together with the need for establishing processes that reduce the impact on critical resources and the environment, is indeed at the center of most contemporary research. Surface science and engineering play a key role in this regard. Refining surfaces and their modifications provides new materials, architectures and processes with a huge potential to aid most societal challenges. Coatings is a well-established, peer-reviewed, online journal that focuses on the dissemination of publications in the field of surface science and engineering. Coatings publishes original research articles that report cutting-edge results and review papers on the hottest topics.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), Inspec, CAPlus / SciFinder, and other databases.

Journal Rank: JCR - Q2 (*Materials Science, Coatings & Films*) / CiteScore - Q2 (*Surfaces and Interfaces*)
