Message from the Guest Editors

Dear Colleagues,

Air pollution is a major concern on global and local scales. As concluded almost ten years ago in the Blacksmith Institute's "World's Worst Pollution Problems 2008", indoor air pollution and poor urban air quality are listed as two of the world's worst pollution problems. In addition to destroying diverse ecosystems due to global warming, air pollution causes serious respiratory and cardiovascular problems in human beings. On the other hand, in spite of the applied efforts to reduce air pollution by improving manufacturing processes, stimulating more sustainable transportation methods, installing emission reduction systems in vehicles, air pollution is still a major problem at global and local scales. Thus, innovative solutions such as nanocoatings are needed to tackle this current human challenge. For example, photocatalytic coatings has become an appealing approach as a green technology for air purification. This Special Issue aims to provide comparisons and assessments of the application potentials of novel nanocoatings for indoor and outdoor air purification.

Message from the Editorial Board

Now more than ever, research is called for to produce technologies and improve knowledge to solve the major challenges faced by our society. The development of new materials and devices for (without the ambition to be exhaustive) energy, health and food technology, together with the need for establishing processes that reduce the impact on critical resources and the environment, is indeed at the center of most contemporary research. Surface science and engineering play a key role in this regard. Refining surfaces and their modifications provides new materials, architectures and processes with a huge potential to aid most societal challenges. *Coatings* is a well-established, peer-reviewed, online journal that focuses on the dissemination of publications in the field of surface science and engineering. *Coatings* publishes original research articles that report cutting-edge results and review papers on the hottest topics.

Author Benefits

Open Access:— free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), Inspec, CAPlus / SciFinder, and many other databases.

Journal Rank: JCR - Q2 (*Materials Science, Coatings & Films*) / CiteScore - Q2 (*Materials Chemistry*)
