

Special Issue

Biocompatible Polymer-Based Materials: Synthesis, Properties and Applications

Message from the Guest Editor

A biocompatible material refers to a substance possessing the property of being compatible with living tissue. Biocompatible materials do not produce a toxic or immunological response when exposed to the body or bodily fluids. A more colloquial definition for biocompatible materials would be that they are the ones used in medical devices within or touching the human body. The purpose of this Special Issue is to gather as many examples as possible regarding the large variety of materials, preparation methods, synthesis, and applications where biomaterials are used and applied.

In particular, the topic of interest includes but is not limited to

- Synthetic, semi-synthetic, and natural polymers;
- Interactions between polymers;
- Biocoatings/nanocoatings;
- Degradation and biodegradation;
- Biocompatibility;
- Industrial applications;
- Composites;
- Pharmaceutical formulation and drug delivery systems;
- Physical chemical characterization;
- Toxicity studies;
- Synthesis methods;
- Strategies to increase biocompatibility.

Guest Editor

Dr. Catalina Natalia Cheaburu-Yilmaz

Physical Chemistry of Polymers Department, "Petru Poni" Institute of Macromolecular Chemistry, 41A Gr. Ghica Voda Alley, 700487 Iasi, Romania

About the Journal

Message from the Editorial Board

Now more than ever, research is asked to deliver knowledge and technologies to solve the major challenges faced by our society. The development of new materials and devices for (without the ambition to be exhaustive) energy, health and food technology, together with the need for establishing processes that reduce the impact on critical resources and the environment, is indeed in the spotlight of most contemporary research. Surface science and engineering play a key role in this regard, with an incredible potential in delivering new and deep scientific understanding and technical solutions essential to solve most of the major societal challenges.

Coatings is a well-established, peerreviewed, online journal dedicated to the vibrant field of surface science and engineering. Coatings publishes original research articles that report cutting-edge results and review papers that make the point on the hottest research topics.

Editors-in-Chief

Prof. Dr. Wei Pan

State Key Laboratory of New Ceramics and Fine Processing, School of Materials Science & Engineering, Tsinghua University, Beijing 100084, China

Dr. Emerson Coy

NanoBioMedical Centre, Adam Mickiewicz University in Poznań, ul. Wszechnicy Piastowskiej 3, 61-614 Poznań, Poland

Author Benefits

Open Access

– free for readers, with article processing charges (APC) paid by authors or their institutions.
