

Special Issue

Hydrophobic, Superhydrophobic, and Oleophobic Surfaces: Durability and Applications

Message from the Guest Editors

The generation of anti-wetting materials and surfaces has become prolific in recent years. Novel surface engineering techniques span the gamut of disciplines from controlled precipitation to lithography to self-assembly. Although the properties of these surfaces, as prepared, can be stunning, their performance after extended application or exposure to adverse conditions is rarely addressed. Cyclic wetting experiments, controlled or random abrasion processes, and other methods that would emulate operational conditions or environmental exposure can all affect the wetting behavior of engineered surfaces. In this issue, the emphasis is on the retention anti-wetting behavior and measured changes in wetting properties after surfaces have been subjected to real or simulated exposure and wear. Contributions to this Special Issue are welcomed on all subjects related to the durability and stability of hydrophobic, superhydrophobic, and oleophobic surfaces.

About the Journal

Message from the Editor-in-Chief

Now more than ever, research is asked to deliver knowledge and technologies to solve the major challenges faced by our society. The development of new materials and devices for (without the ambition to be exhaustive) energy, health and food technology, together with the need for establishing processes that reduce the impact on critical resources and the environment, is indeed in the spotlight of most contemporary research. Surface science and engineering play a key role in this regard, with an incredible potential in delivering new and deep scientific understanding and technical solutions essential to solve most of the major societal challenges.

Coatings is a well-established, peerreviewed, online journal dedicated to the vibrant field of surface science and engineering. Coatings publishes original research articles that report cutting-edge results and review papers that make the point on the hottest research topics.

Editors-in-Chief

Prof. Dr. Wei Pan

State Key Laboratory of New Ceramics and Fine Processing, School of Materials Science & Engineering, Tsinghua University, Beijing 100084, China

Dr. Emerson Coy

NanoBioMedical Centre, Adam Mickiewicz University in Poznań, ul. Wszechnicy Piastowskiej 3, 61-614 Poznań, Poland

Author Benefits

Open Access

— free for readers, with article processing charges (APC) paid by authors or their institutions.
