

Special Issue

Science and Technology of Glassy Coatings

Message from the Guest Editor

This Special Issue is dedicated to 'Science and Technology of Glassy Coatings'. The aim is to bring together scientists working in technology of glassy coatings from several disciplines in order to further develop new methods and ideas. The topics to be covered include (but are not limited to):

- Polymers, metals, alloys, and composites
- Novel materials
- Synthesis and characterization
- Thermodynamics and transport properties
- Theory and simulations
- Applications

About the Journal

Message from the Editorial Board

Now more than ever, research is asked to deliver knowledge and technologies to solve the major challenges faced by our society. The development of new materials and devices for (without the ambition to be exhaustive) energy, health and food technology, together with the need for establishing processes that reduce the impact on critical resources and the environment, is indeed in the spotlight of most contemporary research. Surface science and engineering play a key role in this regard, with an incredible potential in delivering new and deep scientific understanding and technical solutions essential to solve most of the major societal challenges.

Coatings is a well-established, peerreviewed, online journal dedicated to the vibrant field of surface science and engineering. Coatings publishes original research articles that report cutting-edge results and review papers that make the point on the hottest research topics.
