

Special Issue

Advanced Bioactive Glasses and Ceramic Coatings

Message from the Guest Editor

We would like to invite you to contribute to present Special Issue on “Advanced Bioactive Glasses and Ceramic Coatings”. Ceramics can be used in many ways and forms in industry or in the biomedical field. The ceramics utilized in biomedical areas are called bioceramics or bioglasses. Bioceramics as well as bioglasses can be used as replacements for hard tissues in human bodies in order to repair damaged bones, owing to their unique chemical and mechanical properties. Bioactive glasses are regarded as a class of bioceramic materials. The other main advantage of bioglasses and bioceramics is that they can form a strong chemical bond at the interface when they applied as special coatings, promoting their integration into the bone tissues and stimulate cell proliferation and differentiation. To date, three main types of bioactive glasses are known: silicate-based glass (SiO₂), phosphate-based glass (P₂O₅), and borate-based glass (B₂O₃). However, there is intensive research on developing new types of bioglasses and bioceramics by doping them with other bioactive elements or minerals, thus improving their bioactivity.

About the Journal

Message from the Editorial Board

Now more than ever, research is asked to deliver knowledge and technologies to solve the major challenges faced by our society. The development of new materials and devices for (without the ambition to be exhaustive) energy, health and food technology, together with the need for establishing processes that reduce the impact on critical resources and the environment, is indeed in the spotlight of most contemporary research. Surface science and engineering play a key role in this regard, with an incredible potential in delivering new and deep scientific understanding and technical solutions essential to solve most of the major societal challenges.

Coatings is a well-established, peerreviewed, online journal dedicated to the vibrant field of surface science and engineering. Coatings publishes original research articles that report cutting-edge results and review papers that make the point on the hottest research topics.

Editors-in-Chief

Prof. Dr. Wei Pan

State Key Laboratory of New Ceramics and Fine Processing, School of Materials Science & Engineering, Tsinghua University, Beijing 100084, China

Dr. Emerson Coy

NanoBioMedical Centre, Adam Mickiewicz University in Poznań, ul. Wszechnicy Piastowskiej 3, 61-614 Poznań, Poland

Author Benefits

Open Access

— free for readers, with article processing charges (APC) paid by authors or their institutions.
