Deadline for manuscript submissions:
closed (31 January 2024)

Message from the Guest Editor

Dear Colleagues,

Many industrial processes, all the processes occurring within living organisms, and the processes occurring in the water bodies in our planet are all processes in which the relevant molecules are in solution. Solute molecules and solvent molecules interact, and these interactions cause changes in many properties of solute molecules, such as their conformational preferences, energetics, separation of the various types of energy levels and, therefore, electronic and IR spectra, NMR signals, the way in which molecules of different solutes interact with each other, etc. This Special Issue of *Computation* is devoted to the theoretical/computational study of molecules and molecular processes in solution. The scope of the Special Issue is broad, extending to all the aspects of these studies, from theoretical modeling to the study of specific molecules, classes of molecules or processes.

Message from the Editor-in-Chief

You are invited to submit the results of your research for consideration and publication in *Computation*, an international open access journal, which is published quarterly online by MDPI.

The editorial board and staff of *Computation* are dedicated to establishing a benchmark journal for the world scientific and engineering communities for original research articles, reviews, conference proceedings (i.e., peer reviewed full articles), and communications, in the cutting-edge areas of computational biology, computational chemistry, and computation in engineering.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.
High Visibility: indexed within Scopus, ESCI (Web of Science), CAPlus / SciFinder, Inspec, dblp, and other databases.
Journal Rank: CiteScore - Q2 (*Applied Mathematics*)
