### Message from the Guest Editor

Nowadays, advanced technologies such as the IoT and blockchain have been merged into smart cities' networks, e.g., energy and healthcare, making the network more complicated than before. The complexity of smart cities is so high that conventional techniques are unable to address challenges. On the other hand, advanced mathematical techniques as well as computer applications have recently proved their ability to address the complexity of such systems. However, they need strong justification before formal adoption in smart cities. To this end, the main goal of this Special Issue is to address smart cities' challenges using advanced mathematical or computer-based techniques.

& Engineering (DISI), University of  
Bologna, 40136 Bologna, Italy

## Message from the Editor-in-Chief

You are invited to contribute a research article, a comprehensive review or a software paper for consideration and publication in *Computers* (ISSN 2073-431X). *Computers* is an international, peer-reviewed, open access journal which provides an advanced forum for computer sciences. *Computers* is published in open access format—research articles, reviews and other contents are released on the Internet immediately after acceptance. The scientific community and the public have unlimited and free access to the content as soon as it is published. We would be pleased to welcome you as one of our authors.

## Author Benefits

**Open Access:** free for readers, with article processing charges (APC) paid by authors or their institutions.

**High Visibility:** indexed within Scopus, ESCI (Web of Science), dblp, Inspec, and other databases.

**Journal Rank:** CiteScore - Q2 (*Computer Networks and Communications*)
