

Special Issue

Plant Species Diversity and Conservation

Message from the Guest Editors

We invite manuscripts aimed at highlighting the importance of plant species diversity in maintaining ecological balance and sustaining life on Earth. In addition, contributions may highlight threats to plant diversity such as deforestation, habitat destruction, pollution and climate change. They may further advocate the conservation of plant species diversity through coordinated efforts at different levels, including habitat protection and restoration, sustainable land use and invasive species management. In this Special Issue, original research articles and reviews are welcome. Research areas may include (but are not limited to) the following:

- Plant species diversity;
- Threats to plant diversity;
- Conservation of plant species diversity.

Guest Editors

Dr. Claudia D. Nicolae

About the Journal

Message from the Editor-in-Chief

Conservation provides an advanced forum for conservation studies, including biodiversity and environment conservation, resource recycling, conservation and sustainable management, conservation planning and governance, conservation ethics and ecology, creative and multidisciplinary solutions for conservation and restoration, as well as heritage conservation and restoration. In addition, we welcome submissions highlighting transdisciplinary advances in the science and practice of conservation, with application in management and policy decisions. We hope that the advantages of open access, high-quality standards, and rapid publication will encourage scientists and practitioners to choose *Conservation* as a venue to disseminate their research.
