

Special Issue

Zoo Conservation as a Bridge to Biodiversity Recovery: Approaches, Perspectives, and Case Studies

Message from the Guest Editors

Zoo conservation is playing a critical and evolving role in contemporary biodiversity recovery efforts. In an era defined by accelerating ecological crises, ranging from habitat degradation to climate change and the loss of genetic diversity, research institutions, conservation centers, and international organizations are increasingly being recognized as key actors in finding active strategies to halt environmental decline. This Special Issue will examine and strengthen the role of zoo conservation as an active strategy and crucial interface between scientific research and conservation practice that enhances the effectiveness of ex situ and in situ population management.

About the Journal

Message from the Editor-in-Chief

Conservation provides an advanced forum for conservation studies, including biodiversity and environment conservation, resource recycling, conservation and sustainable management, conservation planning and governance, conservation ethics and ecology, creative and multidisciplinary solutions for conservation and restoration, as well as heritage conservation and restoration. In addition, we welcome submissions highlighting transdisciplinary advances in the science and practice of conservation, with application in management and policy decisions. We hope that the advantages of open access, high-quality standards, and rapid publication will encourage scientists and practitioners to choose *Conservation* as a venue to disseminate their research.
