

## Special Issue

# Molecular Variability of Crop Pathogens

### Message from the Guest Editors

Crops account for over 80% of the human diet, but plant diseases and pests are responsible for up to 40% of loss in food production worldwide. Food shortage caused by crop pathogens can lead to increased food insecurity, particularly in populations deeply dependent on plant-based diets. This subject is of particular concern under predicted scenarios of climate change, which could alter the genetics, prevalence and virulence of crop pathogenic organisms.

This Special Issue aims to uncover the influence of genetic and environmental factors on the molecular variability of crop pathogens (including fungi, bacteria, phytoplasmas, viruses, and nematodes) that underpin disease incidence and spread. We welcome original research articles, review articles, perspectives, opinions and methodological articles focusing on the molecular mechanisms involved in the crosstalk between pathogens and crops that could support effective disease management strategies.

## About the Journal

### Message from the Editor-in-Chief

*Crops* (ISSN 2673-7655) is an international, peer-reviewed, open access journal. It publishes original articles, critical reviews, and short communications in every aspect of crop science. The journal invites contributions concerning production, improvement and utilization of all plants that are grown as crops including grains, oilseeds, forages, vegetables, fruits, nuts, and those grown for industrial uses. Our aim is to publish timely experimental and theoretical research results in a rapid and readily accessible manner. Every published article is made immediately available worldwide with free and unlimited access to everyone. If you want your work to reach a global audience of crop scientists, we invite you to submit a paper *Crops*, the international journal of crop science.

### Author Benefits

#### Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

#### Journal Rank:

JCR - Q2 (Agronomy) / CiteScore - Q2 (Agronomy and Crop Science)

#### Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 23.5 days after submission; acceptance to publication is undertaken in 6.8 days (median values for papers published in this journal in the first half of 2025).
