Crystalline Raman Lasers

Message from the Guest Editor

The Special Issue on “Crystalline Raman Lasers” is intended to provide a unique international forum aimed at covering a broad description of lasers utilizing Raman crystals with various temporal, spectral and energy properties, as well as Raman crystal characterizations. Scientists and engineers working with Raman crystals and lasers are invited to contribute to this issue.

keywords:

- Stimulated Raman Scattering
- Light Frequency Conversion
- Raman Effect
- Spontaneous Raman Spectroscopy
- Raman Lasers

Message from the Editor-in-Chief

Crystals are a very important class of structured material, both from a scientific and technological viewpoint. In 2011, the Nobel Prize in Chemistry was awarded to Dan Schechtman for his work on quasicrystals. Our journal already expresses in its name *Crystals* that its focus centers around all aspects of this class of materials, which has fascinated humankind from its beginning. Despite decades of research on crystals, it remains a hot and fascinating research topic.

*Crystals* is a good platform for dissemination of knowledge in this area.

Author Benefits

**Open Access** free for readers, with article processing charges (APC) paid by authors or their institutions.

**High visibility:** Indexed in the *Science Citation Index Expanded* (Web of Science), Inspec (IET) and Scopus.

**Rapid publication:** manuscripts are peer-reviewed and a first decision provided to authors approximately 15.2 days after submission; acceptance to publication is undertaken in 5 days (median values for papers published in this journal in the second half of 2018).
