Deadline for manuscript
submissions:

closed (15 June 2019)

Message from the Guest Editors

We invite researchers studying nanostructures using scattering techniques, or developing such methods to contribute to the Special Issue, Investigation of Nanostructures with X-ray Scattering Techniques, which should serve as a forum to discuss the recent improvements and the state of the art in structural studies on nanostructures.

The potential topics include, but are not limited to, the following:

- structural properties of nanomaterials
- strain determination in nanostructures
- structure to property relationships
- development of scattering techniques aimed at nanostructures
- coherent diffraction applied to nanostructures

Editor-in-Chief

Prof. Dr. Helmut Cölfen

Physical Chemistry, Universität
Konstanz, Germany

Message from the Editor-in-Chief

Crystals are a very important class of structured material, both from a scientific and technological viewpoint. In 2011, the Nobel Prize in Chemistry was awarded to Dan Schechtman for his work on quasicrystals. Our journal already expresses in its name *Crystals* that its focus centers around all aspects of this class of materials, which has fascinated humankind from its beginning. Despite decades of research on crystals, it remains a hot and fascinating research topic.

Crystals is a good platform for dissemination of knowledge in this area.

Author Benefits

Open Access free for readers, with article processing charges (APC) paid by authors or their institutions.

High visibility: Indexed in the **Science Citation Index Expanded** (Web of Science), **Inspec (IET)** and Scopus.

Rapid publication: manuscripts are peer-reviewed and a first decision provided to authors approximately 13.3 days after submission; acceptance to publication is undertaken in 3.5 days (median values for papers published in this journal in the first half of 2019).
