

Special Issue

Crystallization and Purification

Message from the Guest Editors

The modern industrial crystallization technology not only emphasizes the chemical purity of crystals, but also focuses on the control of their internal crystal structure and external morphology. With the increasing demand for high-end and high-value crystal products, such as in the electronics and information industries, crystallization technology has demonstrated advantages in separation and purification, as well as in the control of crystal morphologies. This Special Issue of *Crystals* serves as a platform for researchers to report on the processes and mechanisms involved in utilizing crystallization technology for the separation, purification, and controlled preparation of high-value crystal products.

About the Journal

Message from the Editor-in-Chief

Welcome to *Crystals*, the journal dedicated to the fascinating world of crystallographic research! Crystals are more than mere decorative elements; they hold the key to understanding the fundamental structure of matter. Our mission is to explore the crucial significance of this research across various fields. From medicine to technology, chemistry to geology, crystals play a vital role. Their structure provides insights into new advanced materials, innovative drugs, and groundbreaking technologies. Through *Crystals*, we delve into the microscopic world to discover solutions that will shape the future. Join us on a journey through the *Crystals*, where science merges with beauty and innovation.

Editor-in-Chief

Prof. Dr. Alessandra Toncelli
Department of Physics, University of Pisa, 56126 Pisa, PI, Italy

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE (Web of Science), Inspec, Ei Compendex, CAPlus / SciFinder, and other databases.

Journal Rank:

JCR - Q2 (Crystallography) / CiteScore - Q2 (Condensed Matter Physics)
