Advances in Composite Electrodes Materials

Message from the Guest Editors

Advances in composite electrode materials are greatly needed for high technology in renewable energy harvesting and high-power density storage systems. Due to their tremendous technological potential for producing innovative materials with custom properties and performance profiles much beyond those of the existing ones, advanced composite electrode materials are of considerable interest in both basic science and practical research. Our primary focus is on the creation of composite materials in the form of thin films or nanoparticles for use in a variety of energy storage or harvesting, catalysis, and water purification technologies. Composites created in this way could be created using a variety of physical and chemical techniques, with their morphology, size, shape, crystallinity, flaws, surface area, and homogeneous stoichiometry all potentially modified and tuned using growth mechanisms. The development of materials for composite electrodes, including their synthesis, characterization, and applications, is covered in this Special Issue of *Crystals*, entitled "Advances in Composite Electrodes Materials".

About the Journal

Message from the Editor-in-Chief

Welcome to *Crystals*, the journal dedicated to the fascinating world of crystallographic research! Crystals are more than mere decorative elements; they hold the key to understanding the fundamental structure of matter. Our mission is to explore the crucial significance of this research across various fields. From medicine to technology, chemistry to geology, crystals play a vital role. Their structure provides insights into new advanced materials, innovative drugs, and groundbreaking technologies. Through *Crystals*, we delve into the microscopic world to discover solutions that will shape the future. Join us on a journey through the *Crystals*, where science merges with beauty and innovation.

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE (Web of Science), Inspec, Ei Compendex, CAPus / SciFinder, and other databases.

Journal Rank:

JCR - Q2 (Crystallography) / CiteScore - Q2 (Condensed Matter Physics)
