Message from the Guest Editor

Dear Colleagues,

Thanks to the recent progress in endoscopic diagnosis and treatment, such as magnifying colonoscopy with image-enhanced endoscopy and endoscopic submucosal dissection, endoscopic treatment of gastrointestinal cancer has been gradually expanding. Further, as evidenced by detailed histopathologic and molecular pathologic examination, the number of gastrointestinal cancer cases with a positive outcome following endoscopic treatment has been growing. The aim of this Special Issue is to provide an overview of and summarize the progress of endoscopic diagnosis and treatment in recent years and discuss future perspectives.
