# Biomarkers and Precision Medicine in Upper Gastrointestinal Malignancies

### Message from the Guest Editor

The current treatment of patients with upper gastrointestinal cancers is centred around chemotherapy and surgery, with a limited number of patients being candidates for immunotherapy or molecularly targeted treatment based on biomarker selection. The poor efficacy of treatment, late diagnoses, and the aggressive behavior of most cases contribute to the high mortality of these diseases. To improve results, one major approach pursues the stratification of patients, according to the molecular characteristics for predicting treatment responses or resistance. Other strategies focus on novel biomarkers for early diagnosis, the detection of progression or relapse, or prognosis. We invite researchers to publish studies within this topic in upper gastrointestinal malignancies, including esophageal-gastric, pancreatic, duodenal/small bowel, and hepatic–biliary cancers. I look forward to receiving your contributions.

## About the Journal

### Message from the Editor-in-Chief

I am honored and enthusiastic to serve as Editor-in-Chief of *Current Oncology*. Since its establishment in 1994, *Current Oncology* has been playing an important role in the advancement of cancer care by disseminating new knowledge in the cancer care continuum. *Current Oncology* is affiliated with several key cancer societies and provides a global platform to share scientific progress in oncology. We strive for high standards and work together to maintain a rigorous and unbiased peer review process to publish high-quality articles. We have an outstanding editorial team which is committed to the success of *Current Oncology*.
