Surgical Approach to Primary Lung Cancer and Metastatic Solid Tumors Involving the Lung

Message from the Guest Editors

Lung cancer is the second most frequent tumor and the leading cause of cancer death among both women and men, causing almost 25% of all cancer deaths. On the other side, the lung is the second most frequent target of metastases that form solid tumors, and pulmonary metastasectomy represents the most common surgical procedure in thoracic surgery. Lung metastasectomy is an effective therapeutic alternative in selected patients, depending on primary tumor's biology, disease-free interval, number and site of the nodule to be excised, planned extension of lung resection as well as available alternative therapeutic options. Another surgical option widely debated involves the field of synchronous or metachronous lung cancers paving the way to a personalized therapeutic strategy in particular in the era of immune-therapy and precision medicine. In this Special Issue, we would like to analyze the most significant advancements in the therapy of both primary and secondary lung tumors. We look forward to receiving your valuable participations.

About the Journal

Message from the Editor-in-Chief

I am honored and enthusiastic to serve as Editor-in-Chief of *Current Oncology*. Since its establishment in 1994, *Current Oncology* has been playing an important role in the advancement of cancer care by disseminating new knowledge in the cancer care continuum. *Current Oncology* is affiliated with several key cancer societies and provides a global platform to share scientific progress in oncology. We strive for high standards and work together to maintain a rigorous and unbiased peer review process to publish high-quality articles. We have an outstanding editorial team which is committed to the success of *Current Oncology*.

Editor-in-Chief

Prof. Dr. Shahid Ahmed
