Diagnosis, Monitoring, Prognostication and Treatment in Hepatocellular Carcinoma

Message from the Guest Editor

Since the first tyrosine kinase inhibitor was approved for systemic treatment of advanced hepatocellular carcinoma (HCC) over a decade ago, there has been unprecedented progress in the management and understanding of HCC. Treatment options have been expanded to include immune checkpoint inhibitors, which have now become part of standard of care, and molecular profiling of HCC has identified important drivers that are leading to potentially actionable targets. In addition, newer interventional approaches have been successfully implemented in those with localized disease. Progress is still needed in identifying predictors of treatment response and to determine the role of earlier systemic treatment as adjunct therapy of localized disease. We invite researchers to address one of these topics in the management of HCC from early to late stage disease. I look forward to receiving your contributions.

About the Journal

Message from the Editor-in-Chief

I am honored and enthusiastic to serve as Editor-in-Chief of *Current Oncology*. Since its establishment in 1994, *Current Oncology* has been playing an important role in the advancement of cancer care by disseminating new knowledge in the cancer care continuum. *Current Oncology* is affiliated with several key cancer societies and provides a global platform to share scientific progress in oncology. We strive for high standards and work together to maintain a rigorous and unbiased peer review process to publish high-quality articles. We have an outstanding editorial team which is committed to the success of *Current Oncology*.

Editor-in-Chief

Prof. Dr. Shahid Ahmed
