Palliative-Setting Radiotherapy in Contemporary Cancer Care

Message from the Guest Editor

Palliative radiotherapy (RT) is integral to the care of Oncology patients, traditionally addressing burdensome symptoms or evolving functional compromise, including in emergent care. Often framed for settings where disease is too extensive to cure, RT has also found application among the growing population of patients living with chronic advanced cancer. For this Special Issue, we invite contributions addressing RT along the spectrum of palliative settings, as part of the following:

- A symptom support strategy when no further cancer-directed therapy is planned;
- Prehabilitation/rehabilitation programming in metastatic or recurrent cancer;
- A management approach that aspires to achieve durable disease control even when cancer is no longer confined.

Original research articles and reviews are especially sought, but all submissions will be considered. Looking forward to your contributions.

About the Journal

Message from the Editor-in-Chief

I am honored and enthusiastic to serve as Editor-in-Chief of *Current Oncology*. Since its establishment in 1994, *Current Oncology* has been playing an important role in the advancement of cancer care by disseminating new knowledge in the cancer care continuum. *Current Oncology* is affiliated with several key cancer societies and provides a global platform to share scientific progress in oncology. We strive for high standards and work together to maintain a rigorous and unbiased peer review process to publish high-quality articles. We have an outstanding editorial team which is committed to the success of *Current Oncology*.
