Pathways to Recovery and Resilience in Breast Cancer Survivorship

Message from the Guest Editor

While medical advances have led to higher survival rates in breast cancer, less attention has been focused on the psychological needs of women to rebuild their lives after breast cancer treatment. Psychological support is also scarce in metastatic breast cancer care, yet increasing amounts of research show that psychological well-being affects clinical outcomes. There is an urgent need to understand the mechanisms behind vulnerability in women with a primary or secondary (metastatic) diagnosis, to enable the provision of the best care possible at the right time. This Special Issue brings together early and senior researchers. It will highlight their progressive and stepchange research on how to best support building resilience in survivorship. Theoretical advances using social, cognitive, and affective neuroscience, as well as qualitative methods, can provide the grounds for promising applications in clinical science. AI can help build personalized tools for managing symptoms and empowering women. We hope that it can make a difference by raising awareness and implementing new research in cancer care. I look forward to receiving your contributions.

About the Journal

Message from the Editor-in-Chief

I am honored and enthusiastic to serve as Editor-in-Chief of *Current Oncology*. Since its establishment in 1994, *Current Oncology* has been playing an important role in the advancement of cancer care by disseminating new knowledge in the cancer care continuum. *Current Oncology* is affiliated with several key cancer societies and provides a global platform to share scientific progress in oncology. We strive for high standards and work together to maintain a rigorous and unbiased peer review process to publish high-quality articles. We have an outstanding editorial team which is committed to the success of *Current Oncology*.

Editor-in-Chief

Prof. Dr. Shahid Ahmed
