Cancer Disease: Beyond the Border of Therapy

Message from the Guest Editors

Although the topic of palliative care has been explored for a long time, some aspects persist as barriers against the full affirmation of this clinical and psychological field, and the correct and shared methodology of approaching the problems. One of the most delicate steps in the management of patients with advanced cancer is the identification of the limit beyond which it is necessary to suspend specific therapies for oncological disease and start a palliative path. On the other hand, the appropriate moment to activate palliative care even before the appearance of a life-threatening clinical condition is still debated. What are the criteria and the skills needed to identify these limits? This Special Issue of *Current Oncology* is dedicated to the development of this debate with the aim of achieving an alliance between the world of therapy for “cancer” and the world of “taking care” of persons affected by cancer, representing a step towards achieving tailored palliative care for these persons and their family.

About the Journal

Message from the Editor-in-Chief

I am honored and enthusiastic to serve as Editor-in-Chief of *Current Oncology*. Since its establishment in 1994, *Current Oncology* has been playing an important role in the advancement of cancer care by disseminating new knowledge in the cancer care continuum. *Current Oncology* is affiliated with several key cancer societies and provides a global platform to share scientific progress in oncology. We strive for high standards and work together to maintain a rigorous and unbiased peer review process to publish high-quality articles. We have an outstanding editorial team which is committed to the success of *Current Oncology*.

Editor-in-Chief

Prof. Dr. Shahid Ahmed
