Health Disparities and Outcomes in Cancer Survivors

Message from the Guest Editor

The landscape of cancer survivorship is rapidly evolving, marked by a substantial increase in the number of individuals living beyond their cancer diagnosis. Globally, it is estimated that there are over 20 million cancer survivors, a number projected to grow due to advancements in early detection and treatment modalities (American Cancer Society, 2023). This burgeoning population underscores the importance of addressing health disparities that persist among different socio-demographic groups of survivors. Despite progress in oncology care, disparities in health outcomes such as quality of life, symptom management, caregiver burden, facilitating return to normal life and work, cancer rehabilitation, and access to supportive services remain prevalent among cancer survivors. This Special Issue will feature original research, reviews, and novel case reports that advance our understanding of the underlying mechanisms of health disparities and propose solutions to improve these disparities among cancer survivors across diverse populations.

About the Journal

Message from the Editor-in-Chief

I am honored and enthusiastic to serve as Editor-in-Chief of *Current Oncology*. Since its establishment in 1994, *Current Oncology* has been playing an important role in the advancement of cancer care by disseminating new knowledge in the cancer care continuum. *Current Oncology* is affiliated with several key cancer societies and provides a global platform to share scientific progress in oncology. We strive for high standards and work together to maintain a rigorous and unbiased peer review process to publish high-quality articles. We have an outstanding editorial team which is committed to the success of *Current Oncology*.

Editor-in-Chief
