Recent Advances in Stereotactic Body Radiation Therapy for Spinal Malignancies

Message from the Guest Editor

Bone is among the most common metastatic sites in cancer patients, and the spine is the most involved region for bony metastases. Spinal metastases are often painful, and patients are at high risk of vertebral fracture and neurological disabilities. We aim to produce a Special Issue for the *Current Oncology* journal with the following title: "Recent Advances in Stereotactic Body Radiation Therapy for Spinal Malignancies". As such, we invite authors interested in this field to contribute to the Special Issue. Submissions on the following topics are especially welcomed:

- modern techniques for spine SBRT;
- different target volume delineations;
- different SBRT dose and fractionation;
- response assessment using different imaging modalities (PET/CT, MRI, CT, etc.).

About the Journal

Message from the Editor-in-Chief

I am honored and enthusiastic to serve as Editor-in-Chief of *Current Oncology*. Since its establishment in 1994, *Current Oncology* has been playing an important role in the advancement of cancer care by disseminating new knowledge in the cancer care continuum. *Current Oncology* is affiliated with several key cancer societies and provides a global platform to share scientific progress in oncology. We strive for high standards and work together to maintain a rigorous and unbiased peer review process to publish high-quality articles. We have an outstanding editorial team which is committed to the success of *Current Oncology*.

Editor-in-Chief

Prof. Dr. Shahid Ahmed
