Recent Advances in Diagnosis, Treatment and Prognosis of Giant Cell Tumor of the Bone

Message from the Guest Editor

Giant cell tumor (GCT) of the bone is a locally aggressive and rarely metastasizing primary bone tumor. The controversial treatment is decided by the balance between an adequate surgical margin and sufficient adjacent joint function. Curettage with a high-speed burr and local adjuvants is the most indicated treatment for active lesions, but with a high local recurrence rate. Conversely, en bloc resection for aggressive lesions have lower local recurrence rates, but increased morbidity and possible functional impairment. We would like to invite physicians and researchers involved in this field to contribute observations and results to this Special Issue.

About the Journal

Message from the Editor-in-Chief

I am honored and enthusiastic to serve as Editor-in-Chief of *Current Oncology*. Since its establishment in 1994, *Current Oncology* has been playing an important role in the advancement of cancer care by disseminating new knowledge in the cancer care continuum. *Current Oncology* is affiliated with several key cancer societies and provides a global platform to share scientific progress in oncology. We strive for high standards and work together to maintain a rigorous and unbiased peer review process to publish high-quality articles. We have an outstanding editorial team which is committed to the success of *Current Oncology*.

Editor-in-Chief

Prof. Dr. Shahid Ahmed
