

## Special Issue

# Thermal Processing of Milk and Milk Products

### Message from the Guest Editor

Thermal processing is by far the most widely used technology in the dairy industry. Although it is a mature technology, many aspects of it are still being investigated. It encompasses thermization, pasteurization, extended shelf-life processing, UHT, and in-container sterilization, as well as processes for specific purposes, such as in yogurt manufacturing and pre-heating of concentrates. It includes conventional heating methods, such as use of plate and tubular heat exchangers, direct steam heating methods, as well as non-conventional methods, such as microwave, ohmic, and joule heating. The effects of thermal processing are many and varied and this Special Issue is open to research on any of them, including microbiological, chemical, biochemical, nutritional, textural, and organoleptic. Research on computer simulation of thermal processing is also welcome.

## About the Journal

### Message from the Editor-in-Chief

*Dairy* (ISSN 2624-862X) is an international, peer-reviewed open access advanced forum for studies related to the advances in dairy science. It publishes reviews, regular research papers and short communications. Our aim is to encourage scientists to publish their experimental and theoretical results in as much detail as possible. There is no restriction on the maximum length of the papers. The full experimental details must be provided so that the results can be reproduced.

### Author Benefits

#### High Visibility:

indexed within ESCI (Web of Science), Scopus, FSTA, and other databases.

#### Journal Rank:

JCR - Q1 (Agriculture, Dairy and Animal Science) /  
CiteScore - Q1 (Agricultural and Biological Sciences  
(miscellaneous))

#### Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 23.4 days after submission; acceptance to publication is undertaken in 2.4 days (median values for papers published in this journal in the first half of 2025).
