

Special Issue

Data Science in Invertebrate

Message from the Guest Editors

Despite considerable efforts to study the biodiversity on the planet, many data have not yet been published. This makes it difficult to analyze the distribution of species, analyze the settlement of invasive species, analyze the variability in ranges and species abundance, analyze the alpha diversity of regions, and identify "biodiversity hotspots". Datasets, databases, networks, and information infrastructures have been used in recent years to understand the distributions of species. This Special Issue is a great opportunity to publish a "Data Descriptor", to provide a description of research datasets (one dataset per article). Data documents provide recognition of these efforts through peer-reviewed publications.

About the Journal

Message from the Editor-in-Chief

Data is an open access journal that publishes scientific data in a reliable, citable, and accountable manner. Data grants the opportunity to formally share valuable data, for academic credit. It covers a wide range of disciplines in which data is generated so that published data is discoverable and available for wider re-use. The journal has highly accomplished scientists from a variety of disciplines on the editorial board. The publication emphasizes clarity, honesty, quality, and novelty and has a rigorous peer-review process. We strongly encourage you to share your data vision in Data.

Editor-in-Chief

Prof. Dr. Jamal Jokar Arsanjani

Geoinformatics and Earth Observation Research Group, Department of Planning, Aalborg University Copenhagen, A.C. Meyers Vænge 15, DK-2450 Copenhagen, Denmark

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, ESCI (Web of Science), Ei Compendex, dblp, Inspec, RePEc, and other databases.

Journal Rank:

JCR - Q2 (Multidisciplinary Sciences) / CiteScore - Q2 (Information Systems and Management)
