

# Special Issue

## Big Data and Digital Health

### Message from the Guest Editors

The digital revolution has transformed the reality of what healthcare means today. Wearable technologies, automated clinical laboratories, sensors, genomics, and various other wireless devices have changed the way healthcare is delivered, setting the path for a digital health future that is increasingly drawing attention from both academia and industry. The key driver of this revolution will be the data. Medical data have become complex and analyses of these data have brought new discoveries and challenges, allowing us to develop new insights and expand our knowledge in the field. It is an exciting time to bring in new discussion topics and ideas on big data and digital health as data become a critical part of our day-to-day lives. This Special Issue is intended to present discussions and advances at the intersection of digital health and big data. We would like to invite you to submit articles addressing the digital health ecosystem and the extent to which new technologies can push the health industry forward.

## About the Journal

### Message from the Editor-in-Chief

Data is an open access journal that publishes scientific data in a reliable, citable, and accountable manner. Data grants the opportunity to formally share valuable data, for academic credit. It covers a wide range of disciplines in which data is generated so that published data is discoverable and available for wider re-use. The journal has highly accomplished scientists from a variety of disciplines on the editorial board. The publication emphasizes clarity, honesty, quality, and novelty and has a rigorous peer-review process. We strongly encourage you to share your data vision in Data.
