Seismic Data – Research and Impact

Message from the Guest Editor

Seismic data are produced or collected by geophysical scientists in different ways to study the Earth's environmental problems. Although online seismic data are accessible across the globe, there is a lack of a unique platform that enables scientists to share the data produced locally and in a professional and credible manner. A large portion of innovative, novel ideas and scientific findings cannot be realized, retested and verified due to the unavailability of data that they have been always kept as "dark-stored data". There are two groups of seismic data encouraged to be shared: (1) original seismic data generated from scratch, and (2) secondary data produced as outcome of the initial data processing. In recent years, scientific communities have attempted to make their data transparent. The editor is willing to invite you to submit articles addressing the process of seismological data collection, acquisition, processing, and management, so that these data will be (re)used by other scholars and add value to the preliminary published results from them. Seismic waveforms and hypocentral datasets include, but are not limited to, data and methods.

About the Journal

Message from the Editor-in-Chief

Data is an open access journal that publishes scientific data in a reliable, citable, and accountable manner. Data grants the opportunity to formally share valuable data, for academic credit. It covers a wide range of disciplines in which data is generated so that published data is discoverable and available for wider re-use. The journal has highly accomplished scientists from a variety of disciplines on the editorial board. The publication emphasizes clarity, honesty, quality, and novelty and has a rigorous peer-review process. We strongly encourage you to share your data vision in Data.

Editor-in-Chief

Prof. Dr. Jamal Jokar Arsanjani
Geographic Information Science, Department of Planning and
Development, Aalborg University Copenhagen, A.C. Meyers Vænge 15,

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid
by authors or their institutions.

High Visibility:

indexed within Scopus, ESCI (Web of Science), Ei
Compendex, dblp, Inspec, RePEc, and other databases.

Journal Rank:

JCR - Q2 (Multidisciplinary Sciences) / CiteScore - Q2
(Information Systems and Management)
