Message from the Guest Editor

Dear Colleagues,

Despite the general decline of dental caries incidence in the recent years, dental disease remains prevalent among vulnerable population and those in the underserved communities. The oral health disparity has been attributed to a lack of access to care and an uneven distribution of resources and dental workforce. Engaging primary care providers of other healthcare professions could potentially improve care access and, hence, an early detection of dental disease and referral for timely intervention. In this Special Issue, we would like to elicit interest and research focused on the inter-professional oral health education. We sincerely invite and call on all prospective authors to kindly submit their manuscript(s) for consideration of publication on this critical topic.

Prof. Brent Lin
