Laser Dentistry: The Current Status and Developments

Message from the Guest Editors

The aim of this Special Issue "Laser Dentistry: The Current Status and Developments" is to provide a source of information to general practitioners and specialists regarding the most recent advances in laser dentistry. This Special Issue will cover topics such as lasers, LEDs, photodynamic therapy, Photobiomodulation, interaction with oral tissues, oral treatments, the treatment of periodontal and peri-implant diseases, and tissue engineering. Additionally, we welcome research projects centered around treatment modalities and light energy responses, as well as clinical studies that aim to apply light to oral tissues, thereby illuminating the biological and interactive mechanisms that can ultimately enhance the quality of treatment for oral conditions and needs.
