

# Special Issue

## Dermoscopy in Skin Cancer

### Message from the Guest Editors

Skin cancers are very frequent worldwide and account for a large number of clinical issues requiring dermatological evaluation. The development of dermoscopy has led to the identification of a large number of different pathognomonic patterns. Interestingly, dermoscopy might provide a useful tool to differentiate between certain skin tumors and even between their diverse types; moreover, it can also be of help in the follow-up after surgery and medical treatment. Of note, numerous methods of automatic and AI-based readings of dermoscopy have been recently developed, with controversial results. On the other hand, comparisons between dermoscopy and other non-invasive diagnostic tools have been reported, and we are strongly convinced of their importance. This Special Issue will discuss the latest updates on the usefulness of dermoscopy, both in the diagnostic process and in the follow-up of skin tumors, and it is also focused on reporting novel developments in the field of dermatology.

## About the Journal

### Message from the Editorial Board

---

#### Editors-in-Chief

Prof. Dr. Chalid Assaf

1. Department of Dermatology and Venerology, Helios Klinikum Krefeld, Krefeld, Germany
2. Institute of Molecular Medicine, Medical School Hamburg, Hamburg, Germany

Prof. Dr. Thilo Gambichler

1. Department of Dermatology, Christian Hospital Unna, Unna, Germany
2. Department of Dermatology, Dortmund Hospital gGmbH, University Witten/Herdecke, Witten, Germany

---

#### Author Benefits

##### Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

##### High Visibility:

indexed within Scopus and other databases.

##### Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 25.1 days after submission; acceptance to publication is undertaken in 5.8 days (median values for papers published in this journal in the first half of 2025).
