Message from the Guest Editors

Dear Colleagues,

Designing processes represent a difficult and complex issue for both scientists and technologists.

In a Special Issue of *Designs*, titled "Integrated Design and Process Science", we invite you to publish the results of research and considerations covering a multidisciplinary approach to process design. The Special Issue is focused on recent advances in transdisciplinary design and process science from different disciplines, including engineering, mathematics, computer science, chemical technology, and natural sciences. The Special Issue will also cover optimization of processes, as well as the automation and computerization of manufacturing processes, including reengineering.

We welcome communications, original research articles, and review articles.
